

Controls for HW Commissioning

As the next phase of the LHC-CP activity and to optimize the CO group activities for LHC a series of meetings is being held with Controls Partners to review their controls related activities for Hardware Commissioning and the specific needs for controls support.

The information gathered will be used to:

- set priorities within the controls group,
- formulate the controls strategy and requirements for HW commissioning,
- and to build a global controls planning for project management.

Meetings are being organized by A. Daneels and R. Lauckner. Controls experts and corresponding HCWG members are being invited.
